EDUCATION

MEDIEINSTITUTET GÖTEBORG
Web development with focus on E-commerce
Sep 2021 - May 2023

EXPERIENCE

VÄSTRA GÖTALANDSREGIONEN - REGISTERCENTRUM
System Developer | **Aug 2023 -**

I develop and maintain web applications and generic statistical solutions for national healthcare quality registries. My work mainly focuses on building accessible and responsive frontend solutions for dashboards, annual reports, advanced statistics, and patient follow-up workflows.

From IT's side, I have been driving the frontend work for a new generic statistics platform, a solution that affects all registries and how we will work going forward. The work has involved close collaboration with UX and statisticians, where I have worked with planning, creating user stories, refining requirements, and thinking proactively around both technical and user-related needs to create sustainable and well thought-out solutions.

Another part of my job is providing internal IT support to registry coordinators, which requires clear communication, a pedagogical mindset, and the ability to adapt technical discussions depending on the receiver.

Technologies: React, TypeScript, Highcharts, Tailwind, Zod, MSQl Server, Git

INVENTORY MANAGEMENT SYSTEM - PERSONAL PROJECT
Fullstack Developer | **May 2023 -**

Independently designed, architected, and developed an inventory management system that is actively used in a real-world environment. I am responsible for the entire software lifecycle, including requirements, UX, technical architecture, implementation, deployment, maintenance, and continuous feature development.

The system supports secure user authentication, inventory management, categorization, image handling, search and filtering, transaction history and administrative functionality. It is continuously maintained with bug fixes and improvements, while a new generation of the application is currently being developed using the experience gained from professional software development.

Technologies: Next.js, Node.js, React, TypeScript, Tailwind, MongoDB, Git

WALLMANDER & CO - INTERNSHIP
Web Developer | **Feb 2023 - May 2023**

Storyblok - Investigated the possibility to automatically translate texts into different languages when applying new texts in the default language. I created a test server environment and made a mockup case.

BigCommerce - Created a Boilerplate with Next.js for future E-commerce use. I integrated BigCommerce and created dynamic component blocks suited to be customized from WordPress.

H5 FÖRNYELSEBYRÅ AB - INTERNSHIP
Web Developer | **Okt 2022 - Dec 2022**

Built a landing page from scratch for their booking site/service Adventure Hero to attract more users. I did this together with two other LIAs. We built the page with Next.js and Mantine (css library).

Website: <https://business.adventurehero.se>

In addition, I learned how to create tests in Cypress and helped them with the development of their other product Plugga.Tech. Also this built in Next.js and Mantine.
