### EDUCATION

#### MEDIEINSTITUTET GÖTEBORG

Web development with focus on E-commerce

Sep 2021 - May 2023

### PERSONAL QUALITIES

Team player

Ambitious

Problem solving

Leadership

Positive

Curious

Grade in relation to my skills

### HARD SKILLS

Typescript

React

Next JS

Tailwind

Node JS

MSQL Server

MongoDB

Cypress

PHP

Mantine

Stripe.js

Figma

### EXTRA / MERITS

VG in all courses

Diploma for best Master thesis

Played soccer until I turned 23

### EXPERIENCE

#### VÄSTRA GÖTALANDSREGIONEN - REGISTERCENTRUM

System Developer

| Aug 2023 -

I develop and maintain web applications and generic statistical solutions for national healthcare quality registries. My work mainly focuses on building accessible and responsive frontend solutions for dashboards, annual reports, advanced statistics, and patient follow-up workflows.

From IT's side, I have been driving the frontend work for a new generic statistics platform, a solution that affects all registries and how we will work going forward. The work has involved close collaboration with UX and statisticians, where I have worked with planning, creating user stories, refining requirements, and thinking proactively around both technical and user-related needs to create sustainable and well thought-out solutions.

Another part of my job is providing internal IT support to registry staff, which requires clear communication, a pedagogical mindset, and the ability to adapt technical discussions depending on the receiver.

**Technologies:** React, TypeScript, Highcharts, Tailwind, Zod, MSSQL

#### INVENTORY MANAGEMENT SYSTEM - PERSONAL PROJECT

Fullstack Developer

| May 2023 -

I designed and developed a full inventory management system for a real-world use case, with a focus on continuing to strengthen skills within modern frontend development.

The system is actively used and continuously refined based on user needs and feedback. I have been responsible for the entire development process, from planning and solution design to technical architecture, implementation, testing, and ongoing improvements.

The system includes functionality for inventory management, search and filtering, image handling, transaction history, and administration of categories.

**Technologies:** Next.js, React, TypeScript, Tailwind, MongoDB

#### WALLMANDER & CO - INTERNSHIP

Web Developer

| Feb 2023 - May 2023

Storyblok - Investigated the possibility to automatically translate texts into different languages when applying new texts in the default language. I created a test server environment and made a mockup case.

BigCommerce - Created a Boilerplate with Next.js for future E-commerce use. I integrated BigCommerce and created dynamic component blocks suited to be customized from WordPress.

#### H5 FÖRNYELSEBYRÅ AB - INTERNSHIP

Web Developer

| Okt 2022 - Dec 2022

Built a landing page from scratch for their booking site/service Adventure Hero to attract more users. I did this together with two other LIAs. We built the page with Next.js and Mantine (css library).

Website: <https://business.adventurehero.se>

In addition, I learned how to create tests in Cypress and helped them with the development of their other product Plugga.Tech. Also this built in Next.js and Mantine.
